

LHCC1005 Manual

Size : 1.5*1.5*2.7 inches

Weight: 0.8 ounces

Color: Gold

USB Output Current: DC5V 3.1A, 4.8A

Input Voltage: DC 12-24V

Total Power: 36W

Voltage Display Range: 6-30V

Current Display Range: 60-3100ma

Packing Box Size: 3.9*2.3*1.8 inches

How to use it :

1. Plus this car charging into car cigarette lighter hole, it will detect the car battery voltage automatically and shows on the screen, and please kindly noted.

For 12V car, when the voltage is under 11.5V or higher than 14.9V, the display while shinning to remind the driver of your car with the battery issue.

For 24V car, when the voltage is under 23.1V or higher than 27.3V, the display while shinning to remind the driver of your car with the battery issue.

If your car battery has some voltage problem, as the smart car charger detected, you had to find a professional car care shop to examine your car battery to make sure it works well.

2. Connect your device to the car charger by suitable cable, the screen of the car charger will show charging voltage and then shows the charging current. This car charger will identify your devices and input a suitable charging current to make sure the charging won't bring damage to your devices.

3. The input current will decrease until your device's battery is full, then the display will switch back to voltage display.
